

Assignment 1:

Difference Between cookies, session & JWT.

cookies:

cookies are the small data files stored in a user browser. They store user information & help website ~~remm~~ remember user preference.

Session:

Session stored user data on the server. They are more ~~se~~ secure than cookies & expires when the browser is closed.

Difference:

- cookies are stored in the browser.
- session are stored on the server.
- session are more secured than cookies.

JWT: (JSON WEB TOKEN)

JWT is a secure method used for user authentication, it allow data transform btw client & server.
